## EDUCATION

---

**Georgia Institute of Technology** Atlanta, GA

**M.S. in Computer Science**

August 2026 – May 2027

- Concentration: Machine Learning
- Coursework: Natural Language Processing, Computer Vision, Robot Reinforcement Learning, High Performance Computing

**B.S. in Computer Science, Minor in Industrial Design**

August 2022 – May 2026

- GPA: 3.94; Concentrations: Media/Graphics & Modeling/Simulation
- Coursework: Algorithms, Data Structures, Computer Architecture, Computer Networks, Computer Simulation, Human Centered Design, Computer Graphics & Animation, Machine Learning, GIS, Data Visualization

## SKILLS AND AWARDS

---

- Languages: Python, JavaScript, TypeScript, Java, C++, C#, C, HTML, CSS, SQL, Android XML, Swift
- Libraries & Frameworks: React, Node, LangChain, PyTorch, OpenGL, RxJS, React Query, Redux, OpenCV, Pixi, Scikit-Learn, TailwindCSS, Whisper, HTK, MediaPipe
- Tools: Git, Conductor, Cursor, Docker, AWS EC2 & Route 53, Jira/Confluence, Figma, ArcGIS, Blender, MixPanel, DataDog
- Awards/Achievements: HackGT12 Winner, Bronze Palm Eagle Scout, Tau Beta Sigma Affiliate

## EXPERIENCE

---

**Talos Trading** New York, NY

May 2026 – August 2026

**Frontend Software Engineering Intern**

- Shipped 46 Jira tasks and merged 80 PRs (22K+ LOC) across portfolio management, trading, configuration, and reporting workflows using React, TypeScript, RxJS, and Redux. Presented individual work in 2 company-wide demos.
- Designed and implemented product features alongside product and design teams, occasionally owning designs independently; wrote hundreds of automated Cypress and Vitest tests and collaborated with backend engineers to integrate REST and WebSocket APIs.
- Directly resolved client-reported production issues for enterprise clients including T. Rowe Price and State Street; independently investigated root causes using Datadog; identified 15+ bugs and fixed regressions, flaky tests, migrations, and validation issues.

**Seraphine Glass** San Francisco, CA

April 2025 – August 2025

**Founding Engineer**

- Developed augmented-reality glasses with a built-in AI remembrance agent/lifestyle manager; integrated LangChain, Whisper, Google Places, NWS, and GPT with device inputs and external data sources. Backend hosted via AWS S3 & Route 53.
- Secured \$155,000 in pre-seed funding from Fusen and the Georgia Tech Startup Exchange.
- Attended business meetings with 10+ VCs to discuss funding and 5+ manufacturers to negotiate hardware needs and develop a supply chain. Built TikTok and Instagram pages for marketing content, averaging 1,000+ organic views per video.

**American Gaming Systems** Duluth, GA

May 2024 – August 2024

**Fullstack Software Engineering Intern**

- Developed a client-facing UI interface for casino managers to modify slot machine game assets, programmed in Pixi, Node.js, and React.js using Agile principles. Wrote unit tests with C++ RESTful APIs. Delivered project demos to business team and CTO.

## PROJECTS & RESEARCH

---

**Symbiotic AI (Contextual Computing Lab)**

September 2025 - Present

- Detected changes in hand state in videos from Head-Worn Displays, based on ArUco markers, MediaPipe landmarks, and DINO v2 embeddings. Combined Neural Net and Hidden Markov Model for a weakly supervised model with state change accuracy of 96%.
- Utilized simulated annealing to infer handheld objects in videos from Head-Worn Displays based on frame-by-frame CLIP embeddings. Achieved an object inference accuracy of 98%.

**Field Goal Projection – HackGT12 Winner**

September 2025

- Built a CV system that tracks a football in TV footage and projects its 3D coordinates (calibrating for camera movement) to calculate field goal distance. Integrated CSRT tracking, Kalman filtering, HSV isolation, and homography-based calibration.

**Factxis (Friendly Cities Research Lab)**

September 2025 – Present

- Developed a percentile-based data visualization tool (JavaScript & D3) for researchers to analyze socioeconomic indicators across regions. Presented to and in concurrent use by the Atlanta Regional Commission.

**GeoAI (Georgia Tech Research Institute)**

January 2024 – December 2024

- Developed Geographically Weighted Regression (GWR) algorithms; parsed and standardized federal datasets with MySQL.
- Received a Request of Information (ROI) from the Federal Register to use my geospatial analysis research in federal policy.
